

VISION ZERO IN PRACTICE

21 February 2020 - Stockholm, Sweden

Folkets Hus 307, Barnhusgatan 12-14

Official Post Event for 3rd Global Ministerial Conference on Road Safety

Vision Zero/safe system is spreading around the world and some early adopters have experienced a phase of strong scepticism, broad support and a phase where road safety improvement has stalled and even reached a plateau.

In this post-event, focus will be on the implementation of Vision Zero and how Vision Zero advocates could support this process in order to secure a continuously long term improvement in order to eventually reach a safe transport system. Focus will also be on how to make sure that Vision Zero becomes a truly integrated part of our global effort to achieve a sustainable society. Experience and research from real life experience will be explored and discussed.

This post-event for 2020 will be hosted by the Swedish Transport Administration. It will bring together leaders at the highest level of global and regional consultation, government, policy, financing, technology, infrastructure, management and data innovation. The aim of the event is to look at strategic ways on how we can proceed to achieve a safe road system from a sustainable perspective? The presentations will also focus on what impact new technology has on road safety and how we can collaborate together to achieve the 2030 targets.

AGENDA
